

ESS MOLDS

2000

Since 1948

ESS is in this business since 1948, being one of the first mold companies established in Portugal.

Along our existence, in the contacts with clients of several countries, we learned what are their expectations. Year after year, we have been improving our Organization, replacing old by new, adapting our methods to the evolution of technology, to the Global Market and to the needs of our clients.

Accuracy and Punctuality

Being accurate and punctual when producing molds is absolutely necessary to gain the trust of our clients. Their success is our success.

CAD/CAM

ESS is following close the state of the art of the new technologies. We use Autocad, SolidEdge and Mastercam among others.

Our software allows us to read any 3D file directly from other systems like Unigraphics, Pro-Engineer, Catia, etc. We use Internet (e-mail: molds@ess.pt) for file transfer with our clients.

Capacity of response

A group of companies of small dimension and independent technicians associates to ESS work with us. So that we can promptly reply to different solicitations in quantities and specialities.

Quality / Price / Time

ESS is aware that business is made around those three factors.

We are working on ISO 9001 certification.

We know our clients look for interesting prices, so that our clients can render concrete their projects.

Being punctual is a necessary condition to gain the trust of our clients. So we demand the best of ourselves.

Service

ESS is always concerned about keeping clients satisfied. We try to understand the most exactly our clients requirements and promote intensive dialogue about product design and mould design.

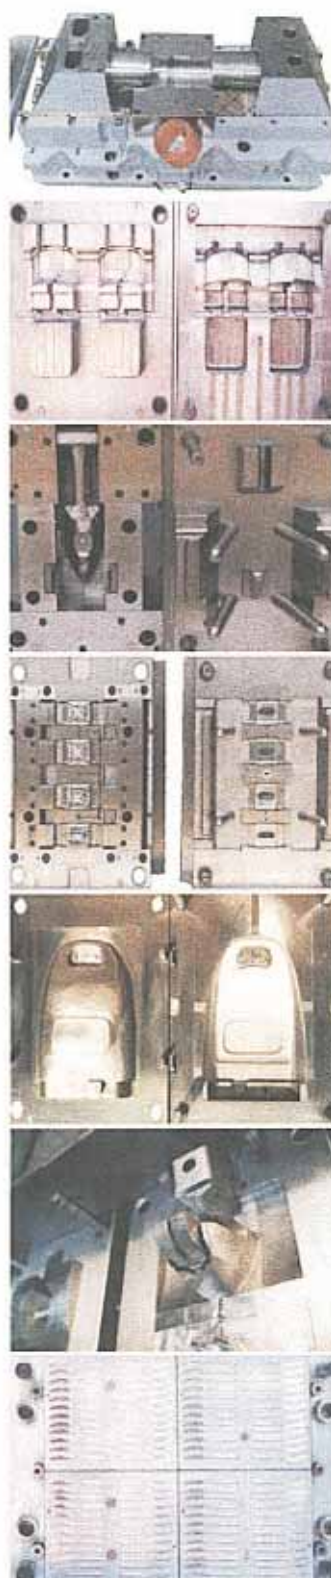

Indoor Tool Testing

A mold has to be conveniently tested.

So we have our own moulding machines, from 25 to 380t, where we run all the molds.

Innovation

Making molds is participating in the process of innovation. We discuss with designers, engineers, product managers of different companies in different situations. Innovation is not only on the process, but also mould, materials, product, etc.
